DO'S AND DONT'S

WALL MANAGEMENT

Min. 50mm width filler must be used for all cabinets touching the wall.

Don't give fillers beyond 100mm thicknesses as they look bad and waste space.

The wall plaster condition should not be more than 15mm and the wall should not be made of hollow bricks.

Coloured laminate should be used as a finish for all the carcass sides that do not touch the wall.

MODULE

Do not use the module in any other way apart from what it is intended for. Base units to be used for base only and wall units to be used for wall cabinets only. They should not be interchanged.

Align the vertical lines of the base and wall units for better visual appeal.

Push to open drawers facia has a gap of 5mm from the carcass and needs to be pushed exactly in the centre.

Always place the countertop module over the base module. Countertop depth must always be unitl shutter level for seamless look. For push to open modules, it should be extended by 5mm.

Do not over load the wall mount cabinets.

SKIRTING

Skirting to be placed under all floor standing units based on the height required.

If there is an existing tile skirting at site, there is no need to break it. Reduce the skirting depth from back or side to fit the cabinet skirting.

MISCELLANEOUS

Add a hardware packet as a default for all projects.

The maximum dimension of any panel should be 8'x4'.
